EXPERIMENT 11

Deploying a Zoho Creator Application from Development to Production Environment

Appointment Booking Form

PRANAV SRINEVAS V
24101068

1. Aim

To deploy the Appointment_Booking_Form application built in Zoho Creator from the Development environment to the Stage environment for review, and then to the Production environment, so that the approved version of the application is live and available to end users.

Changes to an application should be reviewed before they reach live users, so the application is moved through the Stage environment first and then published to Production.

2. Procedure

Step 1: Open the Solutions page — The Zoho Creator Solutions page was opened and the Appointment_Booking_Form application was located (Section 3.2).

Step 2: Add the application to Environments — Deploy > Environments was opened and the application was added with Add Application. Zoho Creator created the development and stage copies and sent a confirmation email at 14:31 IST (Section 3.3).

Step 3: Make a change in Development — In the Development copy of the application, a Remarks field was added in the form builder. The Environments page then showed the label *Changes available*, with version 1.0 in both the Stage and Production columns (Section 3.4).

Step 4: Select components for Stage — Publish > Publish to Stage was chosen, the application was selected and the two changed components, the remarks field and the Appointment_Booking_Form Report, were ticked (Section 3.5).

Step 5: Enter the publish details — A title, description, version type (Minor) and email notification address were entered; the version change V1.0 to V1.1 was confirmed and the version was published (Section 3.6).

Step 6: Confirm the Stage deployment — The “Publish to Stage initiated” message and the completion email from Zoho Creator were checked, and Stage showed version 1.1 (Section 3.7).

Step 7: Publish to Production — Publish > Publish to Production was started, the Stage version V1.1 was selected and published with the Publish Now option (Section 3.8).

Step 8: Verify the live application — The Environments page was refreshed until Production showed version 1.1, and the Publish to Production Completed email was checked (Section 3.9).

Note: this record is based on screenshots captured during the deployment. Version numbers, dates and times are reported as shown on screen. Feature names and menu options depend on the Zoho Creator plan and version.

3. Output

3.1 Multi-stage deployment model

Zoho Creator provides separate environments. Development is where the application is built, Stage is a copy used for review and testing, and Production is the live copy used by end users. A change is published to one environment at a time, so work that has not been reviewed never reaches live users. The application is placed in maintenance mode while a publish is in progress.

3.2 Solutions page

The Solutions page lists the applications in the account. Appointment_Booking_Form was created on Oct 11, 2026.

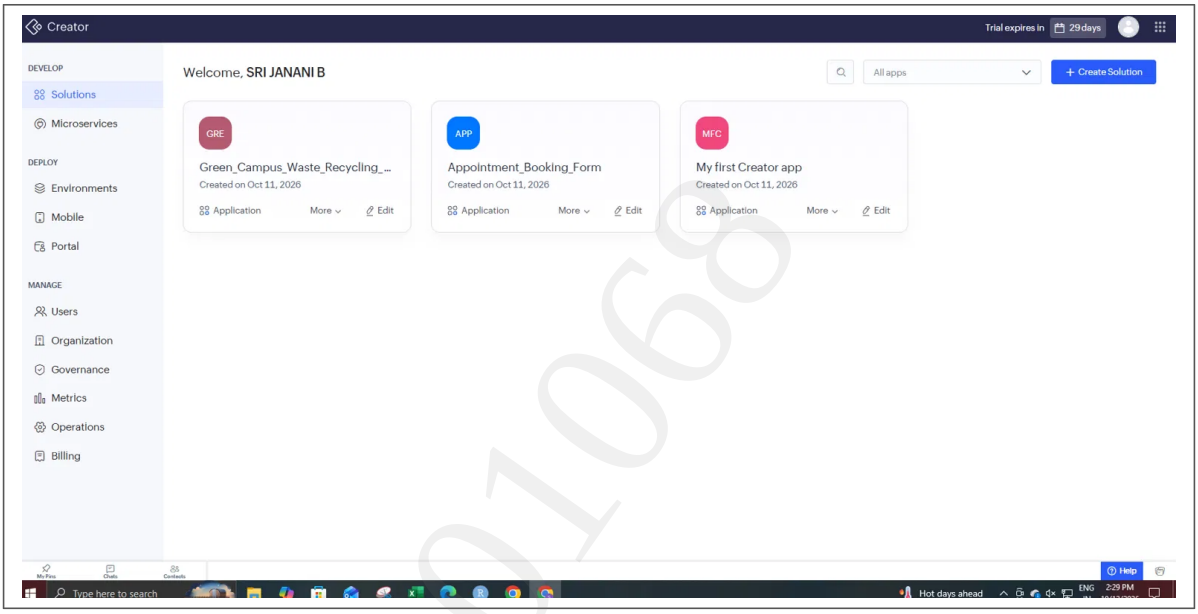

Figure 1: Solutions page showing Appointment_Booking_Form

3.3 Adding the application to Environments

The Environments page initially listed no applications. Add Application opened a panel to select Appointment_Booking_Form, which then showed the status *Creating development app* and, once complete, *No changes available* with version 1.0 in Stage and Production. A confirmation email reported that the development and stage environments were created (initiated 12 Oct 2026, 14:31 IST).

3.4 Change made in Development

The application was opened in Development and a Remarks field was added in the form builder. Back on the Environments page the application showed the label *Changes available* (in green), meaning Development had changes ready to publish, while Stage and Production were still at 1.0 (Oct 12, 2026).

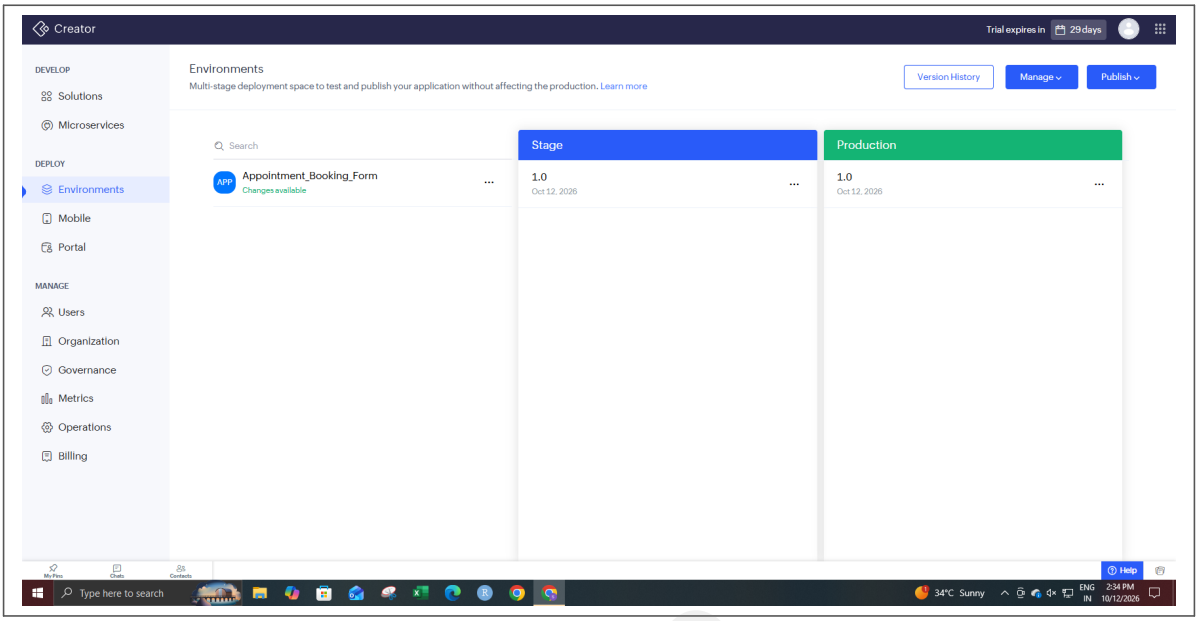

Figure 8: Environments page showing Changes available

3.5 Selecting the application and components

Publish > Publish to Stage opened the Select Apps screen, where Appointment_Booking_Form was ticked. On the next screen the changed components were listed under the application with the count 2: the **remarks** field (Forms > Appointment_Booking_Form > Fields > Medical_Details) and the **Appointment_Booking_Form Report** (Reports). Both were ticked and the footer showed *Selected Components: 2*.

3.6 Publish details

The Publish to Stage form was completed with the details below. A warning stated that the application will be set to maintenance mode and will be inaccessible until published.

Field	Value
Title	Appointment_Booking_Form - Initial
Description	Initial deployment from Development to Stage for testing.
Type	Minor (minimal changes and bug fixes)
Email notification	srijanani.b.2024.csbs@rajalakshmi.edu.in
Version change	V1.0 -> V1.1

3.7 Stage deployment confirmation

After clicking Publish, Zoho Creator displayed “Publish to Stage initiated” and noted that the process takes a few minutes. A “Publish to Stage Completed” email from noreply@zohocreator.com confirmed that Appointment_Booking_Form - Initial was published successfully with current version 1.1, initiated on 12 Oct 2026 at 14:36 IST. The Environments page then showed Stage at version 1.1.

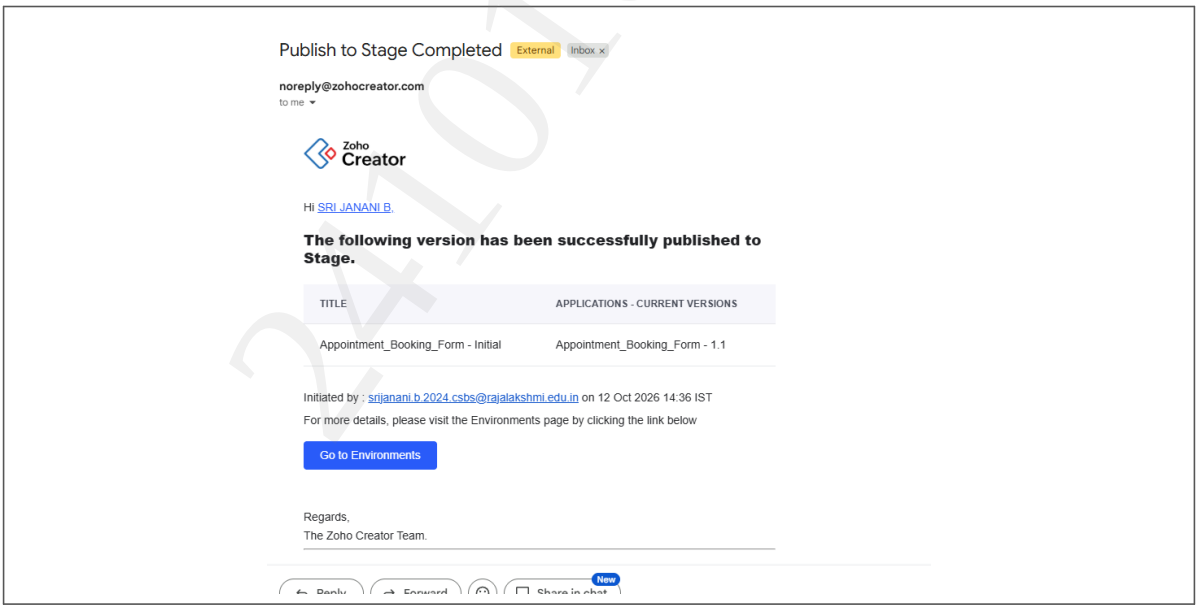

Figure 13: Completion email confirming the version published to Stage

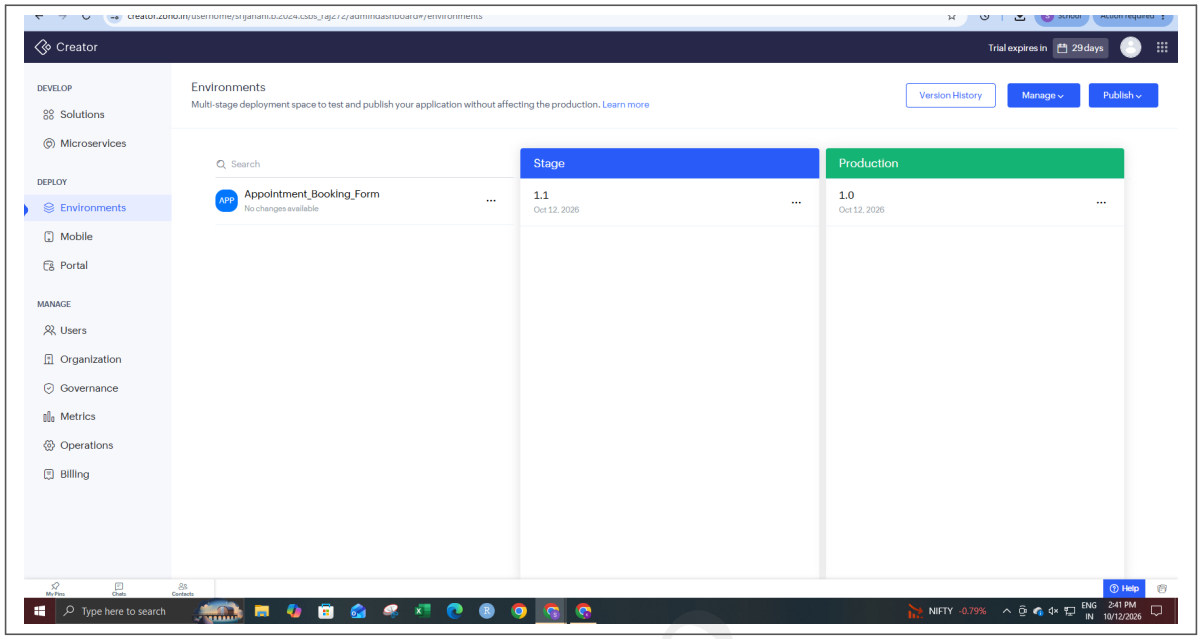

Figure 14: Environments page with Stage at 1.1 and Production at 1.0

3.8 Publish to Production

Publish > Publish to Production listed the version **Appointment_Booking_Form - Initial (V1.1)** created in Stage, with *Selected Versions: 1 (2 Components)*. The final screen offered Publish Now or Publish Later; **Publish Now** was kept, the notification email was confirmed and the version was published. Because Production publishes the version already created in Stage, this step has no separate title, description or type of its own. The same maintenance-mode warning was shown.

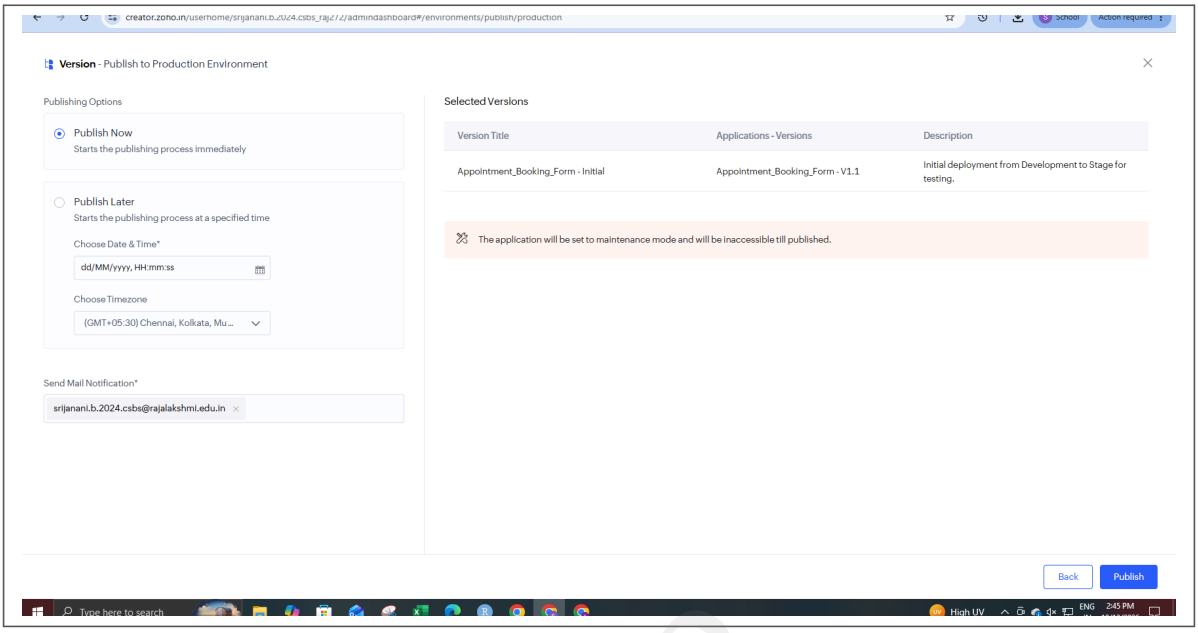

Figure 16: Publish to Production with the Publish Now option

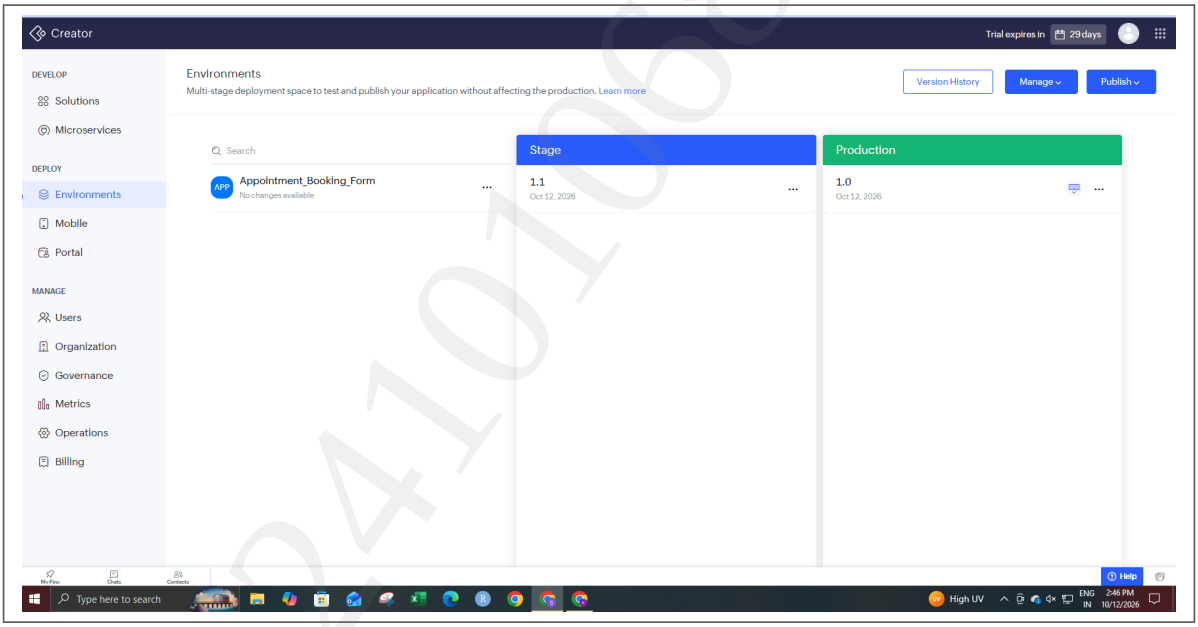

Figure 17: Production publish in progress (Production still shows 1.0)

3.9 Production live and completion email

After a short wait and a refresh, the Environments page showed Production at version 1.1, matching Stage, with the status *No changes available*. The "Publish to Production Completed" email confirmed that Appointment_Booking_Form - Initial was successfully published to Production at version 1.1, initiated on 12 Oct 2026 at 14:46 IST.

3.10 Deployment summary

Environment	Version	Date and time	Status	Description
Development	1.0	Oct 12, 2026	Changes available	Remarks field added in the form builder
Stage	1.1	Oct 12, 2026, 14:36 IST	Deployed	Two components published as a Minor release
Production	1.1	Oct 12, 2026, 14:46 IST	Live	Stage version published with Publish Now

3.11 Deployment practices followed

The release moved one environment at a time, from Development to Stage to Production. The changed components were selected explicitly, the Stage release carried a clear title, description and version type, email notification was enabled and both completion emails were received, the maintenance-mode warning was noted, and the final versions were checked on the Environments page after publishing.

4. Final Result

The Appointment_Booking_Form application was deployed through the Zoho Creator multi-stage process. Two changed components, the remarks field and the Appointment_Booking_Form Report, were published from Development to Stage as a Minor release (V1.0 to V1.1), confirmed by the Zoho Creator completion email. The same version was then published to Production, where the Environments page shows version 1.1 for both Stage and Production, and a second completion email confirms the Production release.

The exercise met its objective of deploying a Zoho Creator application from the Development environment to the Production environment using controlled, traceable steps.
